INTERNFLARE PROJECT

David Iroanya

Made with GAMMA

Project Introduction

This project analyzes Internflare operational and partner data to understand service performance, revenue generation, and intern engagement. The comprehensive dataset includes information about services offered, partner relationships, geographic distribution, intern hours logged, payment transactions, and feedback ratings from stakeholders.

Made with GAMMA

Goal of the Analysis

Service Performance

Understand performance of different services across metrics and time periods

Revenue Analysis

Examine revenue generated across services and identify top performers

Intern Patterns

Identify patterns in intern participation and engagement levels

Payment Insights

Analyze payment status and partner distribution across regions

Strategic Decisions

Provide insights to support business decisions and operational improvements

Made with GAMMA

Data Cleaning Procedure

1

Dataset Inspection

Examined dataset structure and verified column data types for consistency

2

Missing Values

Checked and handled missing values throughout the dataset systematically

3

Data Standardization

Replaced missing Intern_Name values with 'Unknown' for consistency

4

Type Conversion

Converted Feedback_Rating column to numeric format for analysis

5

Data Quality

Checked for duplicates and inconsistencies in the data

6

Distribution Review

Reviewed distributions of numerical columns for anomalies

Made with GAMMA

KEY FINDINGS SERVICE PERFORMANCE

Key Findings: Service Performance

Highest Revenue

Branding

generated the highest revenue at $420k across all service categories analyzed.

Lower Revenue

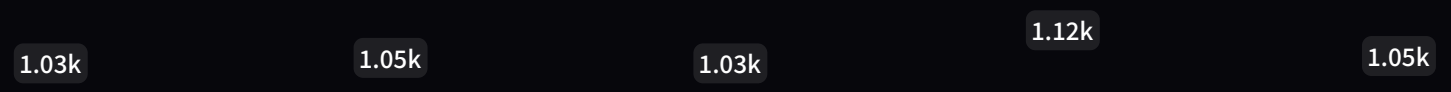
Web Development

generated the lowest revenue at $369k and requires optimization.

Feedback Ratings by Service Type

Branding 3.01 Highest feedback rating	Digital Marketing 2.97 Strong performance
Web Development 2.85 Lower rating	Other Services 2.83–2.91 Consistent range across services

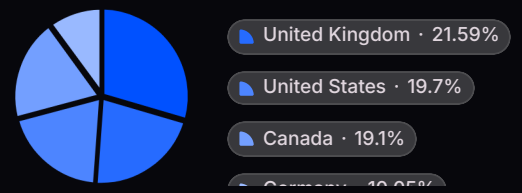
Quarterly Revenue Trend



Made with GAMMA

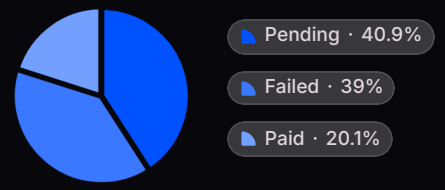
Key Findings: Operational Insights

Country By Number of Partners



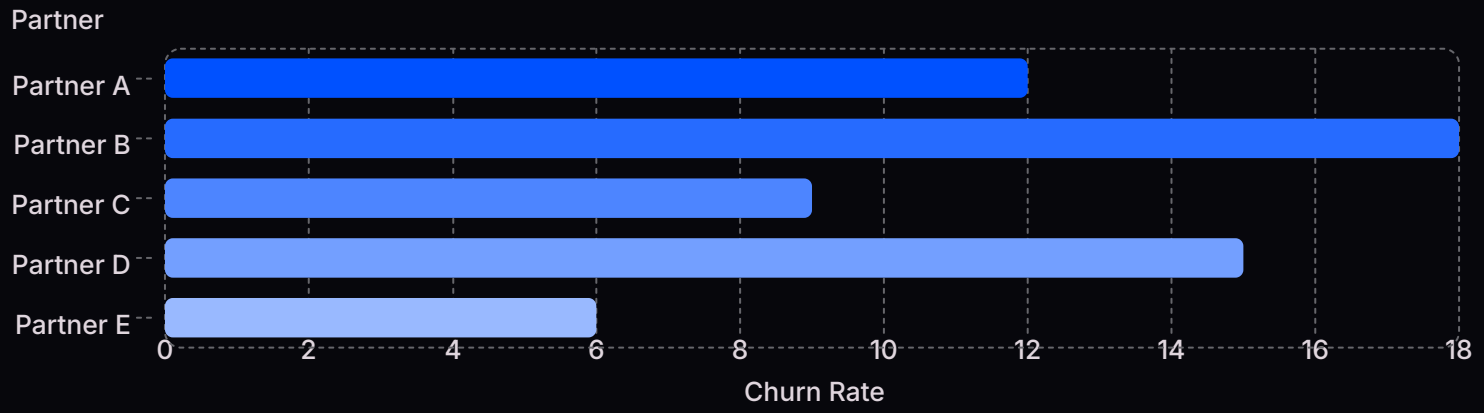
Partner distribution is concentrated in a few key markets, with Nigeria leading the mix. The spread highlights strong geographic reach while also showing room to deepen presence in additional regions.

Payment Status Distribution



Payment status is split between pending and failed transactions, which together make up most of the total mix. This suggests follow-up and payment recovery remain important operational priorities.

Partner Churn Rate



Churn varies noticeably across partners, with a few showing higher attrition than others. The trend suggests focusing retention efforts on the partners with the highest churn to improve overall stability.

Made with GAMMA

MOVING FORWARD

Recommendations & Next Steps

Strategic Focus

Prioritize marketing and partnerships for services with the highest revenue potential.

Payment Efficiency

Enhance payment follow-up systems to reduce outstanding amounts and boost revenue realization.

Partner Management

Continuously track partner performance to identify and strengthen collaborations with top contributors.

Automated Reporting

Implement regular data monitoring and automated reporting for consistent trend analysis.

Data Quality

Maintain rigorous data collection and cleaning practices for high-quality future analytics.

Conclusion

This analysis offers a clear overview of Internflare’s operational and revenue data, identifying key patterns in service performance and revenue generation. These insights are vital for guiding strategic decisions, optimizing revenue collection, and enhancing service offerings on the platform.
